

inTouch Automation

BRINGING YOUR POOL INTO THE FUTURE WITH INTOUCH AUTOMATION

Your backyard swimming pool is a great investment for your household. The family will get many years of enjoyment and potentially it will add significant value to the property at time of selling or renting.

However, most pools require some time and money to ensure it is always in tip top condition. Imagine if you could monitor and control all aspects of your pool equipment from any smart device, anywhere in the world. Start your pool heater remotely so that the pool is warm for that sunny weekend, turn the pool and garden lights on when unexpected guests arrive or turn the spa on for the family when you are working late.

Insnrg have developed a range of fully automated pool equipment and when connected to inTouch enables control of all of your pool appliances including lighting, heating, pool cleaners and water features from the intuitive inTouch Automation App.

WHAT IS INTOUCH ?

The inTouch Portal is a Wi-fi bridge from your Insnrg Vi or Relay Hub that enables the connection of your pool equipment to your inTouch Automation App. The App gives you total control of your water chemistry, pool equipment, pump speeds, lighting and heating when Insnrg appliances are installed.

IT'S SIMPLE!

When combined with Insnrg's pool equipment, your whole system is set up via the App. Pump speeds, lighting control, your preference of heaters for pool or spa and many other functions and choices are easily set up from the inTouch Automation App.

DOWNLOAD THE APP

The inTouch App is available by downloading from www.insnrgapp.com and then adding to your smart device home screen. Set up is easy and intuitive.

CONNECT ANYWHERE IN THE WORLD

You're at work and you receive a message friends are coming round for a BBQ and Spa. Simply

open your inTouch App select Spa, adjust temperature, turn on the pool lights and everything is ready at the touch of an icon.

INVITE USERS, LIMIT ACCESS, PLAN EVENTS

The inTouch App allows you, the owner, to invite family members, friends or even guests to operate your pool and spa. Set temperature limits, blackout times or even give access to your professional pool technician to monitor your pool and it's performance remotely.

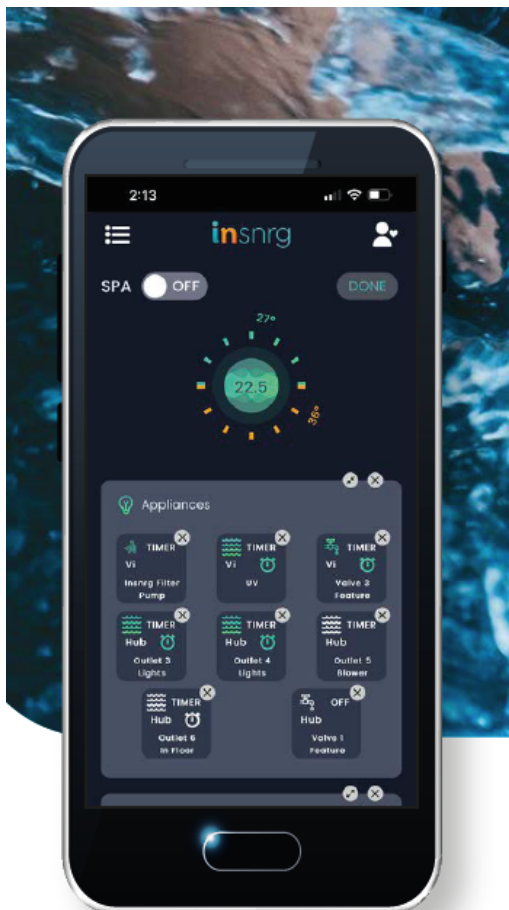

Plan pool parties weeks in advance and inTouch will automatically calculate when to turn appliances on to heat and filter your pool to the perfect pool party temperature. Not only convenient but reduces operating costs by turning on precisely when needed.

INTOUCH RELAY HUB

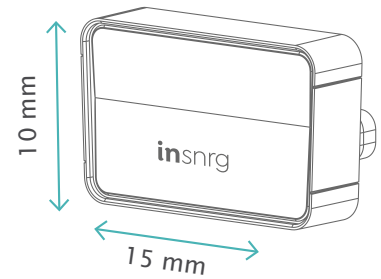

Insnr's range of control products caters for large systems. The inTouch Relay Hub expands the Vi Automation to 12 appliances, 7 valve actuators, temperature sensors and heater control switches. Or use as a stand alone controller without chemical control that the Vi offers. In combination with the Vi and Insnrg variable speed pump, the inTouch relay hub can power up to 65 amps of power (subject to available household power and electrical wiring).

FLEXIBLE

- Every outlet, valve and sensor is assignable to a unique function
- Edit, hide, expand or rename each appliance and change theme
- Set favourite combinations of appliances to operate with one touch
- Dashboard displays temperature history, wi-fi status, equipment performance and status.
